

**INTEGRATED PAYMENT TECHNOLOGIES RELEASES PAYVU**

**Sydney Monday 25 February 2019**

**Integrated Payment Technologies Limited** (InPayTech) is pleased to announce the full market release of its new payment processing service PayVu.

The launch follows an exhaustive program of restricted-user releases for bookkeepers and accountants seeking to streamline payments for small business customers and clients.

All payments are made via internet banking with supplier payments using InPayTech's process of linking the remittance information to the payment to help automate the bank account reconciliation process. This process has recently been approved for patent in the United States of America.

It is expected that PayVu will improve the efficiency and security of payments processing.
